

Case Study: Taking Portacrete® to an Island

Volume supplied	410 bags
Area of application	Foundation Lamp Pole
Solution	Portacrete®
Location	Goa
Duration	1 day

Project Description

The Project site was at Divar Island in Goa located in Mandovi River. Central Lamp pole foundation had to be casted in market area of the Island.

Challenges

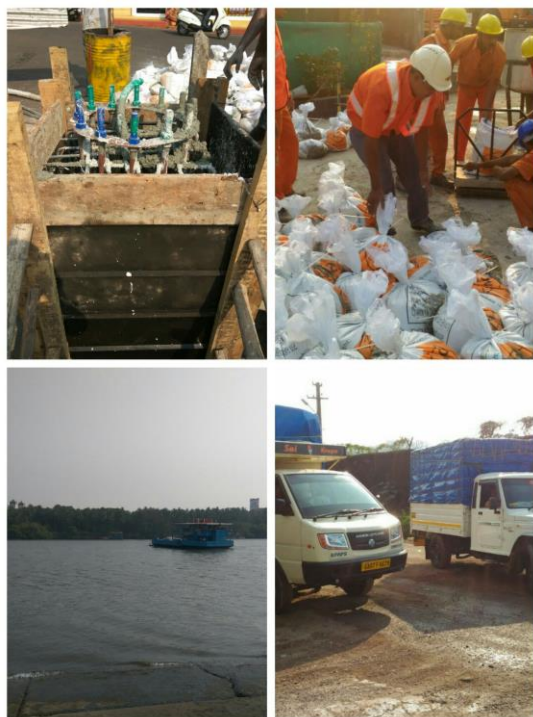

Major challenge was taking Ready Mixed Concrete to Divar island as there was no bridge connecting the island; hence the option of supplying Concrete via TM was ruled out.

Solution

RMC Readymix (India) team visited the site and suggested using Portacrete®.

Portacrete® is a high quality concrete which comes in easy to handle bags. The concrete was batched through computerized batching

About 410 bags of concrete was transported via ferry in a single day. The client was happy with the quality and timely delivery of concrete at site.

Site at Divar Island, Goa.
