Complete Concrete Solutions

## Remote areas and small projects require an accessible concrete solution.

Construction sites located in areas with narrow streets and tight corners pose significant challenges for the delivery of ready-mixed concrete. The restricted access makes it difficult for traditional concrete trucks to reach the desired location on the construction site, leading to delays and increase in costs.

Inaccessible areas may result in uneven concrete pouring or delays in delivery, thereby compromising the quality and timeline of the construction project. This can ultimately impact the structural integrity and overall success of the build.

### Introducing

**PrismMini** from the Do It Yourself (DIY) Prismatic range offers the benefits of RMC in a portable bag. It is engineered to tackle the challenges of hard-to-reach locations and is available in easy-to-handle small consignments.

Gone are the days of relying on bulky concrete trucks. With PrismMini, you have the power to bring consistent, high-quality concrete directly to even the most inaccessible areas of your construction site. Users receive quality-assured ready-mixed concrete in small quantities, conveniently packaged and ready for immediate use.

PrismMini retains its consistency and cohesiveness for an extended period, giving you ample time to work with the mix without compromising on quality. From repairing pavements to renovating homes and constructing small-scale structures in congested areas, PrismMini is the perfect companion for all concrete needs, offering versatility and convenience.

### Key Advantages

Consistent quality

Reduced handling cost of concrete

Optimized manpower

Substantial time saving

Increased durability

User friendly and easy to handle

### Applications

1. Repair and renovation works in houses and buildings
2. Foundation of communication tower
3. Small machine foundations
4. Small concrete works such as sunken slabs, steps, pathways and precast members
5. Repair works of pavements, factory floors and drainage lines
6. Plinth beam, lintel & loft

### Technical Details

- **Minimum Order Quantity:** 40 bags per order
- **Quantity per Bag:** 30 kg ( $\pm$  5% tolerance)
- **Available Grades:** Minimum M15 to Maximum M60 (wet)
- **Maximum Grade for Dry Variant:** M30 (dry) — to be used within 3 months after batching
- **Compaction:** Required
- **Mix Types:** OPC + GGBS/PFA
